China's Economic Reforms**					S	We
Human Resources and Economics*		E?			S?	We
Theories of Social Change and Development					S	We
Issues in Contemporary Chinese Politics			Po			We
International Aspects of China's Reforms			Po			We
Nationalism: Social Science Perspectives			Po			We
Gender, Development and Fertility					S	We
Sustainable Development						We
Application of Geographic Information Systems						We
Critical Urban Studies						We

[^] The first three core courses use sociology textbooks, focus on teaching sociology material, and/or are specifically tailored to sociology students; the fourth core course I don't know.

* taught by an economist, to non-economists

** taught by a sociologist

I didn't match the various courses outside our four core courses to core courses in each of the five social disciplines above, because I don't know how well they match except in economics, where there is a zero match.

I went through the Stanford catalog quickly. While I think my list is correct, I may have missed something on the margin.
